A Community Solar Amusement Park

Lorenzo A.
Catalina Ventura School

It was 7:15 in the morning and it was 2045. Roman and Sophia were going to work at the La Pradera Solar Rides at the park grounds. They open at 9:00 AM. They have to set up their stations like the ring toss and the basketball game, and rides like the Sunny Dessert and the Galaxy Power Rides, to make sure they are safe for the customers. They do specials for the customers during the week to get a little bit more extra money to help pay for the solar panels for the park.

Lately many people have not been coming to the solar power amusement park with an agrivoltaics system, because in Phoenix, Arizona in the summertime it is really hot so the amusement park and Arizona gets a lot more sun and that means it gives more solar and energy back to the environment to power the lights, roller coaster and the machines that help the park work at its highest speed and it also saves the economy from hazardous things that hurt the atmosphere.

They try their hardest to make their money back from the losses so they did a mini fundraiser at the local Peter Piper Pizza to raise money for the workers and to buy things to fix some of the rides like the Galaxy Power Roller Coasters and the Sunny Desert Roller Coaster, and make food stations like the Mexican food truck that are common in Arizona with elotes, carne asada tacos and burritos, and homemade horchata, to help the Mexican family’s and community make a couple bucks and give back to others around the community and people from all of the world.

They made a deal with the pizza shop and every person that came in to help support the fundraiser. The solar panel amusement park gets 60% of the credit for that purchase. After a couple hours they made over 2 thousand dollars to help the workers and rides and with the extra money they brought things to help with the heat like canopies, misters, and tarps to protect the workers and customers from the heat.

After school, some students from Catalina Ventura School go to the amusement park to hang out with friends and family. The solar panel amusement park made a website so you can schedule a date of time when you want to go to the park and special coupons for their purchase. After they made those big moves with the fundraiser and website they got more customers. It is rated one of the best amusement parks in the country, and got rewarded a medal for using solar panels for the park. With the rest of the remaining money, they gave it back to the community and the homeless.
