We are excited to be showcasing our class AAA solar simulators offering the closest spectral match to sunlight for ASTM, IEC & JIS standards compliance.

Our Engineered Sunlight™ tools recreate the complex composition of natural sunlight and unlike other solar simulators, can be customized, programmed, and upgraded over time.

Both of our large (sunbrick) and small area (pico) LED solar simulators have:

- 5x better spectral match to the Class AAA standards,
- with 10x better temporal instability than the standards,
- along with >10x longer lifetime of a lamp-based system.
